

General Instructions and Tips for accessing the KDA Sensitive Crop Registry Map

The map begins with the street layer. As you zoom in, it gets more detailed. You can switch to aerial or topo too, by clicking on the buttons in gray. Under the More.. button, you'll find the sensitive crops layer. This layer turns on and off by checking and unchecking the box next to its name.

The sun button allows you to query the sensitive crop layer for a crop type. When the search box pops up, the graphical search tools come up first. You can select the points by drawing a shape. If you want to search for a value, click the second set of binoculars in the box. Type in the crop type and then click search. A list of results will come up in the box. You can zoom to a point by clicking the sun icon next to its name in the box.

The leaf button works the same way, except it allows you to search by owner name.

The blue button with the 'i' is the identity button. When you click on the identity button, a box will pop up. Once you select the dot and then click on the feature, it will identify it and display it the same way as the search tools.

The red bull's eye allows you to enter an address.

The paint palette button allows you to draw or write on the map.

The last button is for printing.

The tools on the left are for zooming in and out. The hand allows you to pan around the map. The world will take you back to the full extent of Kansas.
